ARSTRACT

The goal of this project was to eliminate sex bias in education through the development of student and teacher awareness of sex bias. Four objectives were developed for the first year project: (1) the development and implementation of nonsexist curriculum in grades 4-12, (2) the development of teachers and librarians awareness of sexism in learning materials, (3) the development of dissemination materials and a resource center of nonsexist learning materials, and (4) the measurement of student awareness of sex bias. To meet these objectives, the project developed three elementary. nonsexist units of instruction and 19 secondary nonsexist lessons which were taught in Minneapolis public and parochial schools. conducted inservice training for teachers and librarians, created a resource center of nonsexist learning materials, and developed criterion-referenced test items to measure student awareness of sex bias. Evaluation involved the monitoring of the development and ·administration of instruments to measure student and teacher ratings of, the lessons and the validation of each lesson by two curriculum experts: inservice training sessions were evaluated by means of participant responses to surveys developed by the evaluator. The progress toward the development of the resource center was monitored, and the results of the criterion referenced testing were analyzed. item difficulties, item discrimination and test reliabilities computed. Findings indicate that the project was successful overall in meeting its objectives. (Author/RC)

Documents adquired by ERIC include many informal unpublished materials not available from other sources. ERIC makes every effort to obtain the best copy available. Nevertheless, items of marginal reproducibility are often encountered and this affects the of the microfiche and hardcopy reproductions ERIC makes available via the ERIC Document Reproduction Service (EDRS) interesponsible for the quality of the original document. I. Summary

A. Program Description

The goal of the project is to eliminate sex bias in education through the development of student and teacher awareness of sex bias. The project staff engaged in inservice training for teachers and librarians in the target area developed and taught lessons dealing with the topic of sex bias in grades 4-6 and 7-12.

Four objectives were developed for the first year project. These objectives pertain to (1) the development and implementation of non-sexist curriculum in grades 4-6 and 7-12, (2) the development of teachers' and librarians' awareness of sexism in learning materials, (3) the development of dissemination materials and a resource center of non-sexist learning materials, and (4) the measurement of student awareness of sex bias.

To meet these objectives, the project developed—3 elementary non-sexist units of instruction and 19 secondary non-sexist lessons which were taught in Minneapolis public and parochial schools, conducted inservice training for Minneapolis teachers and librarians, created a resource center of non-sexist learning materials, and developed criterion-referenced test items to measure student awareness of sex bias.

B. Evaluation

The evaluation involved the monitoring of the development and implementation of the non-sexist lessons and units, including the development and administration of instruments to measure teacher and student ratings of the lessons and the validation of each lesson by two curriculum

experts: the inservice training sessions were evaluated by means of participant responses to surveys developed by the evaluator. The progress toward the development of the resource center was monitored, and the results of the criterion referenced testing were analyzed, item difficulties, item discrimination and test reliabilities computed.

The findings indicate that the project was successful overall in meeting its objectives. With only a few exceptions, the lessons met the criteria for curriculum, and students indicated awareness of sexism as evidenced by their performance on tests developed by the project.

C. Conclusions and Recommendations

The project has been successful in meeting the objectives defined for the first year. Student and teacher reaction to the lessons has been favorable, and student performance on criterion referenced tests indicates their awareness of sexism.

Validation of the lessons by curriculum experts indicate that the elementary lessons need a few revisions or additions, while more extensive revisions, mostly additions, are needed by secondary lessons.

Feedback from inservice training indicates that there is a need for continued dissemination of information and materials dealing with the elimination of sex bias. The second year project will be improved by the early development of project objectives and concentrated effort toward these goals from the date of the second year project startup prior to the beginning of the 1975-76 school year.

II. Detailed Report

A. Identification

- 1. Name of Community: Minneapolis Public Schools
 Special School District No. 1
 807 N.E. Broadway
 Minneapolis, Minnesota 55413
- 2. Locale of Schools: All Minneapolis Public Schools and Requesting Minneapolis Special School District No. 1

3. <u>Target Population</u>:

- a) All elementary students in grades 4-6 and all secondary students in grades 7-12.
- b) All Minneapolis librarians and teachers. At the end of the project year, 439 elementary students in grades 4-6 and 478 secondary students in grades 7-12 had been taught at least one non-sexist lesson by the project staff. Inservice training was provided to 83 Minneapolis. librarians and Tuesday Release Inservice training was provided to 753 teachers from 26 Minneapolis schools.

B.. PROJECT OBJECTIVES AND ACTIVITIES

1. Activities Used to Implement the Objectives

Objective I:

By June 30, 1975, the project will develop and make available to participating project teachers three non-sexist elementary units and at least 20 non-sexist lessons to be integrated into secondary trimester elective courses.

The project staff developed a total of three elementary non-sexist units and nineteen secondary non-sexist lessons dealing with a variety of topics which were taught in Minneapolis Area elementary and secondary schools. The elementary units and inclusive lessons are:

Media
TV Content
TV Ads
Magazine Content
Magazine Ads
Sports
Comics
Toy Ads
Basal Readers

/ Self Awareness
Greeting Cards
Baby X (2 lessons)
Fairy Tales (2 lessons)
Occupations
Activities
Personality
Characteristics

History--Nineteenth Century Activists
Introductory lesson
Concluding lesson
Susan B. Anthony
Elizabeth Blackwell
Henry Blackwell
Frederick Douglass
"Mother" Mary Jones
Lucretia Mott
Elizabeth Cady Stanton
Lucy Stone
Sojourner Truth
Harriet Tubman

The nineteen secondary lessons are titled:

Career and Family Decisions Marriage Contracts Job Characteristics Status of Careers Elementary Textbooks Statistics Sharing Work Athletics Language TV Characters Women Today Baby X Toys Life Cycles Female/Male Ethics Game Women's Work Goals of Feminism Help Wanted Ads

Each lesson was taught in at least one classroom, with most elementary and many secondary lessons taught in three or more classrooms. The lessons were taught in the classrooms of 18 elementary and 11 secondary teachers who volunteered to participate in project activities. (On the elementary level, these teachers also earned two Professional Growth credits for their efforts.)

An Advisory Committee was formed from former members of the Minneapolis Task Force on Sexism. The Committee met every two months and was an information exchange for the project and other related Women's Movement activities.

Objective II

By June 30, 1975, all. Minneapolis librarians and those teachers participating in inservice training will achieve awareness of sexism in learning materials and how to select non-sexist learning materials.

To accomplish objective II, the project conducted a one-hour inservice training for all Minneapolis librarians as well as a Tuesday

Release Time inservice for 753 teachers, aides, and other pupil personnel workers from 26 Minneapolis schools. The topic of these inservices was sex bias in learning materials and classroom activities. Instances of sex-role stereotyping in learning materials and classroom practices were cited and criteria for the selection of non-sexist learning materials were explained and criteria for the selection of learning materials (handouts) were distributed.

Elementary teachers enrolled in the Professional Growth course conducted by the project staff also received information about sex bias in learning materials. As part of the course activities, these teachers also reviewed learning materials for sex-role stereotyping using the criteria for selection of learning materials.

Objective III

By June 30, 1975, the project will develop dissemination materials and establish a resource center of non-sexist learning materials for egeneral dissemination and produce a catalog of the materials in the

In an effort to obtain teacher-made non-sexist learning materials, the project mailed a flyer to all Minneapolis teachers soliciting these materials, and also contacted those Minneapolis teachers and other school systems outside Minneapolis known to have non-sexist learning materials. An ericsearch produced a large bibliography of print materials on sexism, and in addition several magazine subscriptions, books, and films were purchased by the project.

Objective IV

Students will display awareness of sexism as evidenced by performance on criterion-referenced instruments developed through field testing by 1975-76.

1U

To measure student awareness of sexism, the project developed three end-of-unit elementary (grades 4-6) tests, one each for Media, Self Awareness, and Ninteenth Century Activists (History); also a pool of 37 items was developed to measure student awareness of sexism on the secondary level (grades 7-12).

2. Procedures Used to Determine Accomplishment of Objectives Objective I

The quality of the non-sexist lessons was indicated by survey responses from students and teachers directly affected by the project, and the lessons were validated by curriculum experts using a validation instrument developed by the evaluator and project staff. Students were surveyed to determine how well they liked the non-sexist lessons and the evaluator made several on-site visits to observe student classroom behavior. In addition teachers observing the non-sexist lessons were asked to rate student reaction to the lessons on several points using an instrument developed for both internal and external evaluation.

The Advisory Committee set up to act as an information exchange for project activities and other related Women's Movement activities was surveyed. 4 to determine their perception of the Committee's role in project activities.

After all the lessons were developed, two curriculum experts validated each lesson using a validation form developed by the evaluator and project staff. The validation form is designed to determine whether each lesson meets various criteria judged essential for curriculum by the project staff.

Objective · II

Towards objective IJ, the project engaged in inservice training for all Minneapolis librarians, for teachers via the Tuesday Release Time, and for elementary project teachers via a two-credit Professional Growth Course. The effect of the Librarians Inservice was measured in the fall by means of a survey 5 and again in the spring 6 to determine to what extent the librarians had used the materials and information gained from the inservice, and also to measure their need for continued. information and materials relating to sex bias in learning materials. The teachers attending the Tuesday Release Time Inservice were surveyed 7 to determine their rating of the quality and worth of the session. Those elementary teachers enrolled in the two-credit Professional Growth course conducted by the project staff were asked to rate 8 the course on various points.

Objective XII

The project activities toward the establishment of a Resource Center of non-sexist learning materials were monitored by the evaluator through interviews with the project staff.

Objective IV

Instruments of sexism were developed for all three elementary units and for twelve of the nineteen secondary lessons. Item difficulties were computed for each item and reliabilities computed for each test. In the elementary tests, item discriminations were.

see appendix page 55, Librarians' Inservice. see appendix page 57, Librarians' Inservice Followup

see appendix page 58, Tuesday Release Time Evaluation

see appendix page 59, Course Evaluation

^{9 -}see appendix page 60, 62, 64, End of Unit Evaluation--Media, Awareness Post-test, History Post-test and Secondary Test Items.

computed from the difference between item difficulties for upper-scoring students and item difficulties for lower-scoring students. Item discriminations were not calculated for secondary test items since the number of students taking the tests was variable, and in some cases too small relative to the number of items to provide a stable index.

(Groups of students were given a test drawn from items relating to the specific non-sexist lessons they had been taught. Groups of 57, 16, 17 and 44 students were administered five tests with respectively 9, 10, 11, 12, or 15 items drawn from the 37-item pool.) On the elementary level, students were tested at the beginning 10 as well as at the end of the Self Awareness and History units. Pre-testing was not possible in the fall (Media unit) since evaluation activities were initiated after project classroom teaching was begun. Student performance of the elementary and secondary tests was summarized by the computation of mean and mode scores for each test.

¹⁰ see appendix pages 70 and 71 , Awareness Pre-test and History Pre-test

- C. DATA
 - 1. Procedures for Data Collection and Analysis
 - a. To determine their teaching and Women's Movement experience, teacher background data was collected from all project teachers using a survey form developed by the evaluator. Average teaching experience and Women's Movement experiences were summarized.
 - b. The role of the advisory committee was ascertained through a survey administered to 14 active members at the final meeting on April 9, 1975.
 - determined through interviews with the project staff and a review of the instruments used in the critique of lessons.
 - d. Student response to the non-sexist lessons and units was obtained through several on-site classroom observations by the evaluator. An instrument to measure student reaction to the non-sexist lessons and units was administreed to 117 students at the end of the elementary Self-Awareness unit, to 169 students at the end of the History unit, and to 122 students at the end of their series of secondary non-sexist lessons.
 - e. The observing classroom teachers were asked to evaluate student reaction to the non-sexist lessons at the end of each lesson. The 22 elementary lessons were rated a total of 94 times, or an average of 4.27 times per lesson. Nineteen secondary lessons were rated a total of 56 times, or an average of 2.9 times per lesson. The teachers rated each lesson on six points using a rating scale of 1=poor to 5=excellent. Mean teacher ratings were computed for each lesson and for the units overall.

- f. A panel of curriculum experts was selected by the project staff to review the completed lessons and to rate them using the Face Validation form which lists various curriculum criteria to be met. Two validators rated each lesson, indicating whether each lesson met each criterion.

 Those criteria not met by each lesson are reported.
- g. To determine their reaction to the inservice, eighty-three Minneapolis librarians were mailed a survey in the fall shortly after they attended the inservice conducted by the project staff. Again in the spring, a followup survey was mailed to the librarians to ask if they had used the information and/or materials provided by the inservice and if they would like more information and/or materials dealing with sex bias in learning materials.
- h. At the end of the Tuesday Resease Time Inservice, surveys were completed by 753 attending teachers, aides, and other pupil personnel workers. Results were summarized by computing the percentages of responses in each response category both for each geographic area and for the total 753 respondents.
- i. The professional growth course was evaluated by means of a questionnaire administered to participating teachers at the end of the course. Percentages of responses from 17 teachers are reported for each item and for each response category.
- j. Progress toward the collection of non-sexist materials was monitored by means of interviews with the project staff.
- k. The elementary curriculum specialists developed three instruments to measure student awareness of sexism, and the secondary curriculum specialist developed a 37-item pool drawn from 12 of the 19 lessons

produced during 1974-75. Reliabilities for the elementary tests were computed from the correlations between each pair of half-tests. Mean and mode scores, item difficulties, item correlations with the total scores, discrimination indices and frequency distributions were computed from student scores on each test.

In the Awareness and History units, a pre-test was administered to the students to determine change in knowledge or attitude by comparing the pre-and post test scores.

m. In analyzing the secondary test, item analysis was complicated by the fact that five subgroups of the 37 tests items were administered to five different groups of students. Items for each subtest were selected on the basis of the lessons taught to each particular group of students. The items in each subtest were not mutually exclusive. Thus some items were responded to by as many as 132 students while others were responded to by 16 students. The subtests contained 9, 10, 11, 12 and 15 items and were taken by groups of 16, 17, 57, 33, and 44 students respectively. Item difficulties were computed from the proportion of students responding to each item. Mean and mode scores were computed for each subtest, and reliability of the total pool of 37 items was computed.

Findings,

Results of a survey of fourteen active members of the Advisory

Committee are shown in Table 1. The members indicate the most important role is that of moral support and as a sounding board for project activities. Also, the members felt the committee was important in sharing ideas related to the Women's Movement and in continuing the activities of the Minneapolis Task Force on Sexism. The members also

These opinions regarding the role of the Advisory Committee are in agreement with those of the project staff. The members also indicated that they felt the Advisory Committee should be continued; that their membership was worthwhile and that they would volunteer to be members next year. While the Advisory Committee has the potential to be of use to the project, its continuation next year as a project activity should be evaluated by the project staff. If the project is willing to supply the time and effort required by the Advisory Committee without reducing their other efforts toward project objectives, then the Committee could be continued. In any case, the Advisory Committee should have a low priority, among project activities. In actual practice the committee supplies a positive but non-essential input to the project.

These opinions are not supported by the actual data from the survey of Advisory Committee members; however. They are the result of the evaluator's perception of the value of the Advisory Committee to the project based on attendance at several meetings; and from personal communications with the project staff.

The participating teachers and lesson critiquers helped refine elementary lessons at various stages of their development. Both critiquers and participating teachers used project-developed criteria for evaluation of the lessons and were a valuable source of input into lesson refinement. This source of outside evaluation undoubtedly accounts for much of the difference in overall ratings of the elementary versus secondary lessons by the lesson validators.

As a result of on-site visits to classrooms, it appears that students enjoy the non-sexist lessons. This agrees with the results of student evaluations of the Self-Awareness (Table 2) and History (Table 3) units on the elementary level, and with the results of the survey of secondary students (Table 4). In the case of the History unit, 75% of the 169 students said they liked the non-sexist lessons better than their regular lessons, and nearly half (48%) of the 117 students said they liked the Self Awareness lessons better than their regular lessons. felt the lessons were interesting or important while a small percentage thought the lessons were boring or stupid (Self Awareness: 17%, History 5%) The majority of students felt that the non-sexist lessons taught them something they didn't know before. On the secondary level, students also indicated a.positive reaction to the non-sexist lessons. Sixty-five percent of 122 students surveyed said they were glad Ms. Freeman came in. Eighty-eight percent said they learned something new, 64% said the nonsexist lessons changed the way they think, and approximately half (49%) said the lessons will be personally useful.

Teacher ratings of student response to the lessons has been extremely favorable, which agrees with the student responses. On a rating scale of one to five (1=poor to 5=excellent) all the lessons developed by the project were given an average rating above 4 on each of six points:

- Student reaction.
- Student linvolvement
- 3) Lesson development
- Quality of questioning techniques
- Relation of content to objectives
- Students' understanding of the purpose of the lesson

The results of these teacher observations are summarized in Table 5 and Table 6.

Each non-sexist lesson was validated by two curriculum experts using a project-developed validation form. The results of this validation are given in Table 7 (elementary lessons) and Table 8 (secondary lessons). Tables 7 and 8 summarize the criteria not met by each lesson. On the whole, the elementary lessons fared much better than the secondary, which must be partly due to the elementary project staff use of outside thelp in critiquing the lessons. Of the elementary lessons, one (Magazine Content) appears to need major revision. Among the 19 secondary lessons, many need minor additions and/or revisions and some need major revision. For a full listing of the lessons and their deficiencies as reported by the curriculum validators, the reader should refer to Tables 7 and 8. The results of the lesson validation indicates where each lesson needs improvement and should be a valuable guide for future inement of the lessons developed in 1974-75. In some cases, the validation criteria may be inappropriate for a given lesson. Thus, the project may elect to revise the validation form for future use.

To assess the effects of the Librarians inservice, a survey was mailed to all Minneapolis librarians. The results of this survey are shown in Table 9. Eighty percent of the 83 librarians who attended the inservice returned the survey which was mailed to them after the inservice. The librarians were generally favorable in their evaluation of the inservice and the majority of the respondents agreed that sexism should be eliminated from the school environment. The responses indicate that the

inservice increased their awareness of sexism in written materials and in other media in the schools. They felt that the criteria given to them for selecting school materials will be helpful and that they do intend to use these criteria in selecting and promoting materials in their schools. And finally, as an index of the effect of the inservice, the librarians were asked if they had shared information gained from the inservice with others. The majority (64%)said they had shared the information, Almost all (95%) indicated that they had talked with teachers, about 2/3 had talked with friends, 40% had talked to their — spouse and 29% had talked to students about the inservice. Thus the short inservice had a positive impact on the librarians and the repercussions of this inservice have been far-reaching for such a modest effort.

In the spring a followup survey was mailed to 83 Minneapolis
librarians to determine whether they had used the information or materials
provided by the inservice. Table 10 summarizes the responses from 42
responding librarians. Eighty-six percent said they did use the handouts,
73% said they selected learning materials from the lists and/or information.
provided in the inservice. In the future, the majority of the librarians
responding said they would like more lists of non-sexist A-V materials,
non-sexist bibliographies, and lists of non-sexist printed materials.

The results of a survey of 753 teachers et al attending the Tuesday Release Time Inservice are presented in Table 11. These results indicate an overall favorable response to the inservice. Respondents judged the inservice to be interesting, relevant and paced correctly. The session contributed to their interest in and awareness of the problem of sexism in schools. It improved their ability to recognize sexist

practices, and it gave them ideas on how to reduce sexism in their schools. The majority of the respondents indicated that they would become more conscious of how they interact with female and male students, and be sure their expectations of females and males are equal. They said they would select materials with the least possible stereotyping and encourage all students to consider many career options possible for them. Only 20% said they would be willing to have special lessons or units. In all, this inservice appears to have had a positive impact on those attending.

Table 12 summarizes the responses of 17 teachers enrolled in the Professional Growth course conducted by the project staff. They reported the course objectives were well stated, the course organization, methods of presentation, incorporation of outside assignments with presentations were rated very highly. The majority also said the course increased their ability to affect change in sexist practices in their schools. Nearly all (91%) said they would like to participate in an extension of the course.

A survey of all participating project teachers showed that the elementary project teachers average 7 years' teaching experience while the secondary teachers average 10 years' experience. Most have had previous experience in the Women's Movement and view this project as an important means of eliminating sex bias.

To date the project has collected a variety of non-sexist learning materials. Magazine subscriptions, books, and filmstrips abve been purchased. A flyer sent to all Minneapolis teachers soliciting any teacher-made non-sexist learning materials did not yeild any non-sexist learning materials, but did produce names of people who would be willing to use the materials when they become available.

Thus, it appears that non-sexist curriculum for the target area will be developed mainly through efforts of this project or others like it.

The resource center will contain those lessons/units developed during this project year and various print and non-print learning materials purchased by the project. To data, a catelog of materials in the resource center has not been made, but one is expected to be ready for next year.

Table 13 shows the percentages of students endorsing various response categories for each of 11 items from the Self Awareness preand post-test. Except for one item, the difference in the proportions endorsing each response category shows a consistent shift away from sex role stereotypes. Thus the Awareness unit appears to have had the desired impact on students. The reliability of the Awareness post-test is .88 with the mean_score 8.3 and mode 12. Table 14 contains the descriptive statistics, item difficulties, item-total correlations, and item discriminations for the Self Awareness post-test based on scores of 123 elementary students. The items were easy, had moderate correlations with the total score and had moderate discrimination. Table 15 summarizes the descriptive statistics based on the administration of a 16-item test of awareness of sexism in media to 152 elementary students. Table 15 shows the test reliability of .82 with students' mean score 13.7 on the 16-item test. The items had moderate correlations with the total score, ranging from .39 to .66. Most items also had good discrimination ability. The distribution of scores is negatively skewed, with the mode score 16.

Students were pre-tested and post-tested with the same 10-item instrument to get an idea of entry level knowledge of the Ninteenth Century Activists

which is the topic of the History unit. The mean pre-test score on this 10-item tests was .94, the mode 1. On the post-test Table 16 shows a mean score for 165 students was 6.5, the mode 10. The test reliability is .84. The items on the history test are more difficult, have higher discrimination and higher item-total correlations than do items on the other tests.

The secondary test item difficulties for 37 items is shown in Table 17. The items range in difficulty from .50 to 1.0. Reliability for the whole test is > 45. Item-total score correlations were not possible using the total item pool since different groups of students took each various combination of items, and no one took all 37 items. For the five subtests, means and modes are given in Table 18. Students scored high on each of the subtests with means 9.7, 7.1, 10.8, 8.6, and 12.3 on tests with 11, 9, 12, 10 and 15 items respectively.

LESSON VALIDATION

1. Elementary Level

All but one of the elementary lessons was judged to be acceptable using the criteria stated for the lessons. Two raters rated each lesson on each of 18 point's, scoring each point either pass of fail. The validation instrument can be found in the appendix, page

Of the 18 lessons reviewed, eight passed on all points, five lessons failed one area; three lessons failed in two areas, one lesson failed three areas and one lesson failed seven areas. Those lessons which passed in all areas were: Sports, Comics, Content Analysis, Occupations, Fairy Tales, Personalities, Baby X, and Greeting Cards.

Content Analysis

Criteria Not Met

Use of a wide variety of source materials

Use of a wide variety of source materials

Use of a wide variety of source materials

Directions to teacher sufficient to teach the lesson

Use of a wide variety of source materials

- 1) Does lesson provide opportunity for the development of critical thinking
- 2) Sufficient help with questioning techniques
- 1) Provision for Evaluation & feedback
- 2) Do the lessons use a wide variety of source materials
- Are the materials easily accessible
- 1) Clearly stated objectives
- 2) Objectives specific to lesson.
- Provision for sufficient development of vocabulatory
- 4) Sufficient direction for the teacher to teach the lesson:
- 5). Content compatible with objectives
- 6) Provision for evaluation and feedback
- 7) Use of a wide variety of source materials

D. CONCLUSIONS AND RECOMMENDATION

The project met or nearly met its objective of curriculum development, producing three elementary non-sexist units and 19 non-sexist secondary lessons. Both students and observing teachers rated the non-sexist lessons highly. Lesson validators indicated where change is needed in the elementary and secondary lessons, or alternatively the criteria for validation must be changed to reflect the project goals. In future curriculum development it may prove worthwhile to use lesson critiquers outside the project to assist in Tesson refinement in the developmental stages. This was done in elementary curriculum development this year, and it proved useful to the project staff. The Advisory Committee, if it is continued next year, should be given a low priority among project activities since it does little to assist the project in reaching its objectives. The Librarians' Inservice and Tuesday Release Time Inservice were successful in creating an awareness of sexism in learning materials and developing a knowledge of how to select non-sexist learning materials. The librarians indicated a need for continued information and materials on non-sexist print and non-print materials. The two-credit professional growth course conducted by the project staff was rated highly by those enrolled. The teachers enrolled in this course were beneficial to the project also in refining the non-sexist lessons. This approach (participation in the project in exchange for credit) may prove useful in successive years of the project. The project has collected various print and non-print non-sexist learning materials, but has yet to produce a catalog for future users. The catalog should be produced as soon as possible to facilitate dissemination of the non-sexist materials during the next year. The elementary project staff developed instruments to

measure student awareness of sexism with reliabilities between .82 and .88. The secondary project staff developed items relating to 12 of the 19 lessons produced. The total pool of 37 items had a reliability of .45. The project may want to develop test items relating to the seven lessons for which items are not available: Language, Statistics, Women's Work, Career and Family Dynamics, Life Cycles, Laws, and Goals of Feminism. Test data using these items can be a useful tool in evaluating the success of the teacher in reaching the lesson objectives.

And finally, but most importantly, the second year project will be greatly improved by an early date for project startup, including evaluation activities.
